MANAGEMENT OF ALL MAIN TOURIST SERVICES

By choosing AIC TOWeRS platform, clients can manage and sell both direct contracts and XML: hotels, transfers, tours, sightseeings, excursions, apartments, car rental, yacht and sailing, insurance, tourist tickets, trains and flights.

XML INTEGRATION

Allows the integration of the clients' products into third parties platforms or import the suppliers' products directly into the clients' online booking system.

PAYMENT GATEWAY INTEGRATION

Validation and automatic debiting or deferred charging of major credit cards.

CUSTOMIZATION

Allows a wide range of customization of user interface and functionalities and of all the content thanks to a powerful CMS (Content Management System)

CHANNEL MANAGER SUPPORT

Hoteliers are encouraged to connect to your booking system by means of their channel managers, so they can easily update room availability when needed.

AIC Technology

The Online Cloud Based Reservation System designed for Tour Operators

TOWeRS Tour Operator Web Reservation System

BUY AND SELL INTERFACES (B2B, B2C, WHITE LABEL)

The powerful back-end system allows the implementation of a multiple of interfaces for both buying and selling travel porducts, including B2B and B2C websites, the integration with leading payment gateways and major Tour Operators' web services creation of the easily distribuable White Labels.

INTEGRATION WITH ACCOUNTING MANAGEMENT SYSTEMS

Allows the integration and communication with the major accounting software (MIDA, SIAP, AVES, IDEAL) so as to avoid the lenghty and costly manual entry of reservations accountingg details.

EXTRANET ACCESS FOR TRAVEL PRODUCT SUPPLIERS

Allows hoteliers to update availability and rates information stored in the system.

REPORTS AND STATISTICS

Allows the tracking of user behaviour, market, trends, and the distribution of purchases through a powerful data warehouse built in the system.

INVOICING

Invoice issuing
Simple and automatic, ranging from the emission to delivery, up to online publishing.

Active / Passive invoicing
- Automated or assisted active / passive invoice registration.
- Automatic importation of supplier invoices from Excel files.
- Automatic reconciliation and registration: third party interface for the automatic issue and registration of passive invoices, sending and reproting of active invoices and the recording of payments made via the major payment gateways.

Statements of account
Management of statements of account depending in service.

FULL INTEGRATION WITH TOWERS

Allows customers to download invoices straight from the online point of sale.

INTEGRATION WITH ONLINE BOOKING AND ACCOUNTING SYSTEMS

Make it easy to import dossiers from external online booking and / or accounting system.

MANAGEMENT CUSTOMERS AND SUPPLIERS DETAILS

- The complete and easy management of the customers and suppliers details allowing the automation in the sending of communications and invoices.
- Update from Excel files.

PRINT REPORTING

- Provides the essential reporting tools to monitor the accouting state:
- Statements of account
- Customer records
- Supplier records
- Allows for certain markets the sending of accounting data to the local tax authorities
- Annual balance sheet comparison budget management

The Online Cloud Based Accounting System made for Tour Operators and Travel Agents

MIDA My Internet Delivered Accountability

GENERAL LEDGER PRINTING

- VAT Ledger printing
- Daily Takings Book
- Purchase Invoices Register

SETTLEMENT OF VAT

- 7 4ter
- VAT
- Pro Rata

XML, EXCEL AND PDF EXPORTS

Allows interoperability with a wide range of third party sharing and publishing tools by exporating system data into the most popular exchange formats.

CHART OF ACCOUNTS MANAGEMENT

Fully customizable to the specific needs of any tour operators.

OPERATIVE MANAGEMENT

Uploading of tourism sector services and price lists
Vouchers, lists for tour guides, fax orders to suppliers, restaurants, transfers, tours, excursions, guide visits, museums, etc.

Creation of recurring orders
Based on a «master» order template and periodic configurations.

Order template
The system allows the copying of «templates» without manual insertion.

Multi logo
The system allows the update of more than one company logo to use on different invoices.

Currency conversion
Real time tool connected with BCE to convert currencies.

IT CONSULTING

In the changing landscape of information & communications technology, progress advances without limits and standing still. In this scenario relying on reliable ICT consultants focusing on the specific tasks is crucial to reduce costs and at the same time achieve various business goals.

AIC Technology is ready to meet these challenges with the client, by analyzing their problems, offering them advice on the best strategic solution and following them in all stages of the implementation cycle of new services and technologies. Our specialization in virtualization and clustering allows us to transform the client's needs into a concrete plan of action.

NETWORKING

AIC Technology is specialized in advising on both LAN and WAN networks.

We will follow the customer step by step in the implementation of a unified «data-voice» infrastructure. We also manage the design and the transition to the IPv6 protocol, with a customized migration plan or through the implementation of a new project.

CLOUD APPLICATION

The unique flexibility of web applications, developed using the latest technology, combines with the reliability of the cloud.
Web applications are hosted on the AIC Technology's cloud system, entirely built up using open source platforms, is able to face the many different needs in terms of hardware, network, backup and fault tolerance. Cloud applications are able to interface to third party web services and legacy systems already present in the customer's information system, The multi-platform web client can be customized in every aspect to better match the real needs of the customer and allow it to extend its use to their customers or employees.

AIC Technologies offers Web design services with the development of websites and also graphic design solutions customized to the clients requirements, with the project analysis and brochure creation, letter head, business card and all other service connected to the travel industry.

AIC Technology uses the best tools available on the market.

The utilisation of Open source technology has made of AIC Technology one of the European leader in the use of «open» systems.

SERVER FARM

For maximum guarantee of privacy & reliability, AIC Technology hosts the software it products in its own server farm. It is in an air conditioned environment always ensuring the correct temperature and humidity, including powerful UPS system to maintain constant electrical supply in case of blackouts, etc. Backup of all data is carried our every night.

LINUX

A robust, reliable and safe operatoring system is an obvious choice for those who want to rely on a server platform with a 24/7 guaranteed up-time.

APACHE

With no doubt one of the most efficient currently available in the running od web servers. In addition to belonging to the «free software» category, it is fully integrated with all other technologies and is considered on invaluable tool.

AIC Technology

Wide range of options
to ensure safety and reliability

TECHNOLOGIES

PostgreSQL

When speed is less of an issue, it shows its ability to implement complex projects, allowing the management of data in complete autonomy.

MySQL

This is the most popular open source database system in the world and is among the fastest available, it is ideal for the project development of medium to low complexity while at the same time ensuring very high reliability and speed.

POSTGRESQL

When speed is less of an issue, it shows its ability to implement complex projects, allowing the management of data in complete autonomy.

XML

«Lingua franca» in many web applications, it allows them to communicate with all the modern web services, without precluding the exchange of data with legacy and newer softwares

PHP

It is one of the most popular and complete scripting lanuguages designed for the web. Its strengths are its ease of use and excellence performance.

Python

It is an «object oriented», robust and reliable programming lanuguage. The enormous expressive power of the language drastically reduces the possibility of developer errors.
